

GS10A

automatic sorting system

This product is a high-speed intelligent scanning code weighing and sorting line developed by our company, designed for e-commerce and logistics users. The whole line uses a high-performance scanning camera, high-speed weighing machine, and pendulum wheel sorting machine as the core, which sets automatic scanning, automatic weighing, automatic sorting, automatic collection, automatic removal of wrong parts, and other functions in one. Up to 3500 pieces/hour. It is the ideal solution for weighing and sorting in the e-commerce logistics industry. Weighing accuracy is maintained within a 10-20g range.

At the same time, it can connect with mainstream ERP systems and WMS systems according to customer needs.
